

E-PIPE 618 KIT - AUTOMATIC E-CIGARETTE **SMOKING VAPE WOOD PIPE - 2.2ohm**

The E-Pipe 618 is the best electronic pipe we could find on the market. Combining the classic design of a traditional pipe with the contemporary act of vaping this is a really unique piece of kit.

The E-Pipe 618 is auto-activated upon drawing air through the device. There is no button, which means it cannot go off accidentally when in your pocket or bag. When in use the light inside the pipe bowl will glow. The pipe features an automatic cut off which cuts the power after 5 seconds of continual drawing - a really useful safety feature which prevents the battery from overheating.

The kit comes complete with two 2.5ml dual coil clearomisers which produce excellent plumes of vapour and allow you to keep an eye on how much e-liquid you have left. Either keep one tank as a backup in case of emergencies, or if you like variety fill them with different flavour e-juices and use them alternately. The pipe uses a 510 thread, so you can also combine it with other tanks you may have already.

The large capacity of the clearomizer and the large battery mean that the the E-Pipe 618 will last an average vaper all day, but if you are a heavy user you have the spares you need.

The E-Pipe 618 provides a smooth, very natural feeling, very satisfying vape, which combined with its stylish design and sturdy gift/storage box makes this a great alternative to the standard vaping devices on the market or an excellent present for any e-cig user.
